

GCE AS MARKING SCHEME

SUMMER 2023

INTRODUCTION

This marking scheme was used by WJEC for the 2023 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

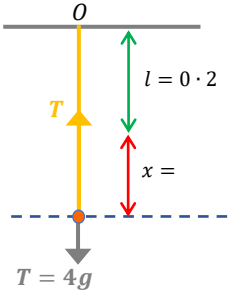

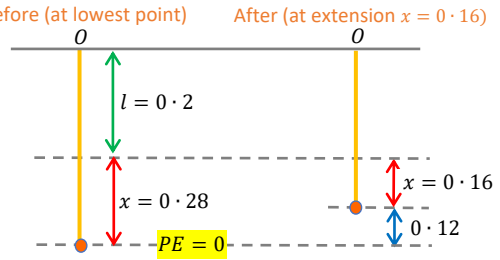

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

Alternative Solution for Conservation of Energy A1

KE = loss in EE - gain in PE

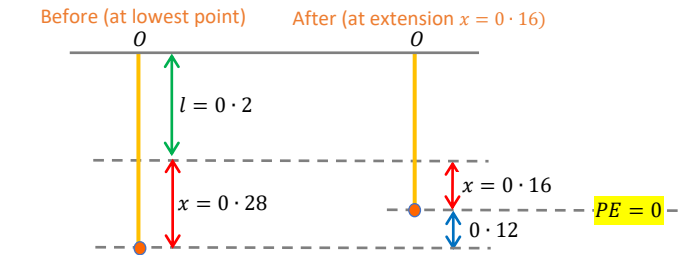

(b)

$$\frac{1}{2}(4)v^2 = \frac{5g(0.28^2 - 0.16^2)}{2(0.2)} - 4g(0.28 - 0.16) \quad \text{A1}$$

$$2v^2 = 6 \cdot 468 - 4 \cdot 704 \quad \left(2v^2 = \frac{33}{50}g - \frac{12}{25}g \quad \text{or} \quad 2v^2 = 0.64g - 0.48g\right)$$

Alternative PE reference points

(b)

$$\frac{5g(0.28)^2}{2(0.2)} - 4g(0.12) = \frac{1}{2}(4)v^2 + \frac{5g(0.16)^2}{2(0.2)} \quad \text{A1}$$

$$9 \cdot 604 - 4 \cdot 704 = 2v^2 + 3 \cdot 136$$

Alternative PE reference points

(b)

$$\frac{5g(0.28)^2}{2(0.2)} - 4g(0.28) = \frac{1}{2}(4)v^2 + \frac{5g(0.16)^2}{2(0.2)} - 4g(0.16) \quad \text{A1}$$

$$9 \cdot 604 - 10 \cdot 976 = 2v^2 + 3 \cdot 136 - 6 \cdot 272$$

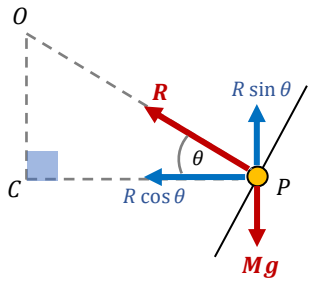

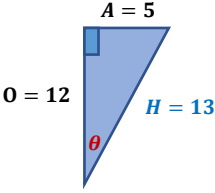

(b)

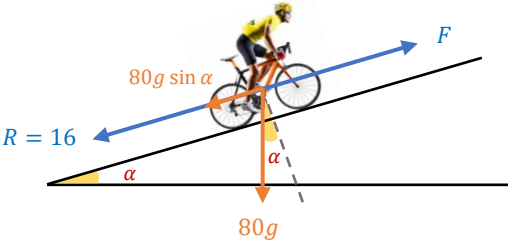

$$\frac{5g(0.28)^2}{2(0.2)} - 4g(0.48) = \frac{1}{2}(4)v^2 + \frac{5g(0.16)^2}{2(0.2)} - 4g(0.36) \quad \text{A1}$$

$$9 \cdot 604 - 18 \cdot 816 = 2v^2 + 3 \cdot 136 - 14 \cdot 112$$
