Mark Scheme (Results)

Summer 2017

Pearson Edexcel GCE
In Further Pure Mathematics FP3 (6669/01)
Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK’s largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world’s leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We’ve been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk
General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate’s response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate’s response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
PEARSON EDEXCEL GCE MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75

2. The Edexcel Mathematics mark schemes use the following types of marks:
   - **M** marks: Method marks are awarded for ‘knowing a method and attempting to apply it’, unless otherwise indicated.
   - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
   - **B** marks are unconditional accuracy marks (independent of M marks)
   - Marks should not be subdivided.

3. Abbreviations
   These are some of the traditional marking abbreviations that will appear in the mark schemes.
   - bod – benefit of doubt
   - ft – follow through
   - the symbol \( \checkmark \) will be used for correct ft
   - cao – correct answer only
   - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
   - isw – ignore subsequent working
   - awrt – answers which round to
   - SC: special case
   - oe – or equivalent (and appropriate)
   - d… or dep – dependent
   - indep – independent
   - dp decimal places
   - sf significant figures
   - \* The answer is printed on the paper or ag-answer given
   - \( \Box \) or d… The second mark is dependent on gaining the first mark

4. All A marks are ‘correct answer only’ (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

6. If a candidate makes more than one attempt at any question:
   • If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
   • If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

7. Ignore wrong working or incorrect statements following a correct answer.
General Principles for Further Pure Mathematics Marking
(But note that specific mark schemes may sometimes override these general principles).

Method mark for solving 3 term quadratic:

1. Factorisation

\[(x^2 + bx + c) = (x + p)(x + q), \text{ where } |pq| = |c|, \text{ leading to } x = \ldots\]

\[(ax^2 + bx + c) = (mx + p)(nx + q), \text{ where } |pq| = |c| \text{ and } |mn| = |d|, \text{ leading to } x = \ldots\]

2. Formula

Attempt to use the correct formula (with values for a, b and c).

3. Completing the square

Solving \[x^2 + bx + c = 0; \quad \left( x \pm \frac{b}{2} \right)^2 \pm q \pm c = 0, \quad q \neq 0\], leading to \[x = \ldots\]

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. \[(x^n \rightarrow x^{n-1})\]

2. Integration

Power of at least one term increased by 1. \[(x^n \rightarrow x^{n+1})\]

<th>Question Number</th>
<th>Scheme</th>
<th>Notes</th>
<th>Marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$y = \text{arsinh} \left( \tanh x \right)$</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Way 1**

$cosh y \frac{dy}{dx} = \text{sech}^2 x$

or

$cosh y = \text{sech}^2 x \frac{dx}{dy}$

$M1: \pm \text{cosh} y \text{ or } \pm \text{sech}^2 x$

$A1: \text{All correct}$

$\frac{dy}{dx} = \frac{\text{sech}^2 x}{\cosh y}$

$\frac{dy}{dx} = \frac{\text{sech}^2 x}{\sqrt{1 + \sinh^2 y}} = f(x)$

Uses a **correct identity** to express $\frac{dy}{dx}$ in terms of $x$ only

$cso. \text{ There must be no errors such as incorrect or missing or inconsistent variables and no missing h’s.}$

$A1^*$

**Way 2**

$t = \tanh x \Rightarrow y = \text{arsinh} t$

$\frac{dt}{dx} = \text{sech}^2 x, \frac{dy}{dx} = \frac{1}{\sqrt{1 + t^2}}$

$M1: \frac{dt}{dx} = \pm \text{sech}^2 x, \frac{dy}{dx} = \pm \frac{1}{\sqrt{1 + t^2}}$

$A1: \text{Correct } \frac{dt}{dx} \text{ and } \frac{dy}{dx} \text{ and correctly labelled}$

$\frac{dy}{dx} = \frac{dy}{dt} \frac{dt}{dx} = \frac{\text{sech}^2 x}{\sqrt{1 + t^2}} = f(x)$

Uses **correct form of the chain rule** for their variables to express $\frac{dy}{dx}$ in terms of $x$ only

$cso. \text{ There must be no errors such as incorrect or missing or inconsistent variables and no missing h’s.}$

$A1^*$

**Way 3**

$u = \tanh x \Rightarrow \frac{du}{dx} = \text{sech}^2 x$

Correct derivative

$\int \frac{\text{sech}^2 x}{\sqrt{1 + \tanh^2 x}} dx = \int \text{sech}^2 x \frac{1}{\sqrt{1 + u^2} \text{sech}^2 x} \frac{du}{dx}$

$M1: \text{Complete substitution including the "dx"}$

$A1: \text{Fully correct substitution}$

$= \int \frac{1}{\sqrt{1 + u^2}} du = \text{arsinh} \left( u \right) + c$

Reaches $\text{arsinh} u$

$y = \text{arsinh} \left( \tanh x \right) \left( + c \right)$

Reaches $y = \text{arsinh} \left( \tanh x \right)$ with or without $+ c$ and no errors such as incorrect or missing or inconsistent variables or missing h’s.

$A1^*$

**Total 5**
### Special Case:

<table>
<thead>
<tr>
<th>$y = \text{arsinh} \left( \tanh x \right)$</th>
<th>$\Rightarrow \frac{dy}{dx} = \frac{1}{\sqrt{1 + \tanh^2 x}} \times \text{sech}^2 x$</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$= \frac{\text{sech}^2 x}{\sqrt{1 + \tanh^2 x}}$</td>
</tr>
</tbody>
</table>

Note that the sech$^2 x$ needs to appear separate from the fraction as above and not just the printed answer written down.

To score more than 2 marks using a chain rule method, a third variable must be introduced.

k \\
\end{bmatrix}
\begin{bmatrix}
11 \\
14 \\
13 \\
\end{bmatrix}
\]

M1: Attempt cross product between normals  
A1: Correct normal vector (any multiple)

Alternative:
\[
x - 2y - 3z = 0, \quad 6x + y - 4z = 0: \ x = 1 \implies y = -\frac{14}{11}, z = \frac{13}{11}
\]

\[
\Rightarrow \mathbf{n} = \begin{bmatrix}
11 \\
-14 \\
13 \\
\end{bmatrix}
\]

M1: Solves \(x - 2y - 3z = 0, \ 6x + y - 4z = 0\) to obtain values for \(x, y\) and \(z\)

A1: Correct vector (or values)

\[
\begin{bmatrix}
11 \\
-14 \\
13 \\
\end{bmatrix} \cdot \begin{bmatrix}
\frac{3}{4} \\
\frac{9}{7} \\
\frac{5}{7} \\
\end{bmatrix} = \ldots \text{ or } \begin{bmatrix}
11 \\
-14 \\
13 \\
\end{bmatrix} \cdot \begin{bmatrix}
\frac{2}{7} \\
\frac{3}{7} \\
-1 \\
\end{bmatrix} = \ldots
\]

Attempt scalar product between their normal and their \(\mathbf{OQ}\) or \(\mathbf{OP}\). Must obtain a value.

M1

\[
\mathbf{r} \cdot \begin{bmatrix}
11 \\
-14 \\
13 \\
\end{bmatrix} = -33
\]

Any multiple e.g. \[
\begin{bmatrix}
11k \\
-14k \\
13k \\
\end{bmatrix} = -33k \ (k \neq 0)
\]

A1

Note that if they use the intersection with \(P_1\)
\[
\begin{bmatrix}
17 \\
15 \\
-16 \\
\end{bmatrix}
\]
for \(Q\) allow all the marks to score in (c).

</table>
| **6(a)** | det $M = 1 \times (2 -1 - k (-2 + 4)(+0) = 1 - 2k^*$ or e.g. 
 $$\det M = (0) -1(1 + 4k) -1(-2 - 2k) = 1 - 2k^*$$ |
 or rule of Sarrus: 
$$\det M = 2 - 4k -1 + 2k = 1 - 2k^*$$ |
 or e.g. 
$$(1) \begin{vmatrix} -2 & 1 & -k \\ 1 & -1 & -4 \\ -k & 2 & 1 \end{vmatrix} + 0 \begin{vmatrix} 2 & -2 \\ -4 & 1 \end{vmatrix}$$ |
**M1**: Correct attempt at determinant (at least 2 'elements' correct). May need to check as they might use a different row/column. |
| **M1A** | A1: Obtains printed answer with no errors. If they use determinant notation as in the last example, then you must see at least one intermediate step before the printed answer e.g. minimally $1 - 2k + 0$. |
| **(2)** | | |
| **(b)** | $(M^t)$ (minors) (cofactors) 

$$\begin{pmatrix} 1 & 2 & -4 \\ k & -2 & 1 \\ 0 & 1 & -1 \end{pmatrix}$$ or 
$$\begin{pmatrix} 1 & 2 & -6 \\ -k & -1 & 1 + 4k \\ k & 1 & -2 - 2k \end{pmatrix}$$ |
**M1**: Full attempt at inverse ignoring determinant. Need to see all stages but allow numerical slips. |
| **M1A1** | A1: 2 correct rows or 2 correct columns including reciprocal of determinant |
| **(4)** | | |
| **(c)** | $l_2 : (1 + 5\lambda)i + (-2 + 2\lambda)j + (3 + \lambda)k$ |
**M1**: Attempt $l_2$ in parametric form |
| **M1A** | A1: Correct parametric form |
| **(6)** | | | Total 12 |
### (c) Way 2

- **i−2j+3k** and **6i+4k** are on **l_2**
- \( M^{-1}(i−2j+3k) = i−3j−10k \)
- \( M^{-1}(6i+4k) = 6i−16j−44k \)

\[
\begin{pmatrix}
  6+5\lambda \\
  -16-13\lambda \\
  -44-34\lambda \\
\end{pmatrix}
\]

\[
x-6 = \frac{y+16}{-13} = \frac{z+44}{-34} \quad \text{oe}
\]

- \( a_i + b_1\lambda \)
  - \( a_i + b_2\lambda \rightarrow \frac{x-a_1}{b_1} = \frac{y-a_2}{b_2} = \frac{z-a_3}{b_3} \)
- M1: Attempt two points on \( l_1 \)
- A1: Two correct points on \( l_1 \)
- M1: Uses their points to obtain parametric form for \( l_1 \)
- A1: Correct parametric form for \( l_1 \) or correct position and direction.
- M1: Attempts cartesian form from their parametric \( l_1 \) correctly.
- A1: Correct vector or values for \( x, y, \) and \( z \)

### (c) Way 3

\[
\begin{pmatrix}
  1 & 0 & 0 & x \\
  2 & -2 & 1 & y \\
 -4 & 1 & -1 & z \\
\end{pmatrix}
\]

\[
\begin{pmatrix}
  x \\
  y \\
  z \\
\end{pmatrix}
\]

\[
= \begin{pmatrix}
  1 \\
  -2 \\
  3 \\
\end{pmatrix}
\]

- M1: Solves \( M \)
- A1: \( i−3j−10k \). Correct vector or values for \( x, y, \) and \( z \)

\[
\begin{pmatrix}
  1 & 0 & 0 & x \\
  2 & -2 & 1 & y \\
 -4 & 1 & -1 & z \\
\end{pmatrix}
\]

\[
\begin{pmatrix}
  x \\
  y \\
  z \\
\end{pmatrix}
\]

\[
= \begin{pmatrix}
  5 \\
  2 \\
  1 \\
\end{pmatrix}
\]

- M1: Solves \( M \)
- A1: \( 5i−13j−34k \). Correct vector or values for \( x, y, \) and \( z \)

\[
x-1 = \frac{y+3}{-13} = \frac{z+10}{-34}
\]

- M1: Attempts Cartesinan form from their values correctly. Dependent on both previous \( M's \).
- A1: A complete correct equation

### (c) Way 4

\( l_2 : (1+5\lambda)i + (−2+2\lambda)j + (3+\lambda)k \)

- M1: Attempt \( l_2 \) in parametric form correctly
- A1: Correct

\[
\begin{pmatrix}
  1 & 0 & 0 & x \\
  2 & -2 & 1 & y \\
 -4 & 1 & -1 & z \\
\end{pmatrix}
\]

\[
= \begin{pmatrix}
  1+5\lambda \\
  -2+2\lambda \\
  3+\lambda \\
\end{pmatrix}
\]

- M1: Uses \( Mx = l_2 \) in parametric form
- A1: Correct expressions for \( x, y, \) and \( z \)

\[
x-1 = \frac{y+3}{-13} = \frac{z+10}{-34}
\]

- M1: Attempts Cartesian form from their values correctly. Dependent on both previous \( M's \).
- A1: A complete correct equation

</tr>
<tr>
<td>(a)</td>
<td>$I_n = \int \cosh^{n-1} x \cosh x , dx$</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

$$I_n = \int \cosh^{n-1} x \cosh x \, dx = \sinh x \cosh^{n-1} x - \int (n-1) \cosh^{n-2} x \sinh^2 x \, dx$$

M1: Integration by parts in the correct direction. If the formula is quoted it must be correct otherwise look for an expression of the form

$$\pm \sinh x \cosh^{n-1} x \pm k \int \cosh^{n-2} x \sinh^2 x \, dx$$

A1: Correct expression

$$= \sinh x \cosh^{n-1} x - (n-1) \int \cosh^n x \, dx + (n-1) \int \cosh^{n-2} x \, dx$$

Introduces $I_n$ and $I_{n-2}$. Dependent on both previous method marks.

$$\left[ \sinh x \cosh^{n-1} x \right]_0^{\ln 2} = \sinh(\ln 2) \cosh^{n-1}(\ln 2)(-0)$$

$$= \left( \frac{3}{4} \right) \left( \frac{5}{4} \right)^{n-1}$$

Use of given limits on their $\sinh x \cosh^{n-1} x$. Does not need to be evaluated but note that

$$\cosh(\ln 2) = \frac{5}{4}, \sinh(\ln 2) = \frac{3}{4}$$

$$I_n = \frac{3 \times 5^{n-1}}{n \times 4^n} + \frac{(n-1)}{n} I_{n-2} *$$

cao A1*

(6)
### (a) Way 2

\[ I_n = \int \cosh^{n-2} x \cosh^2 x \, dx = \int \cosh^{n-2} x \, dx + \int \cosh^{n-2} x \sinh^2 x \, dx \]

Writes \( \cosh^n x \) as \( \cosh^{n-2} x \cosh^2 x \) and uses \( \sinh^2 x = \pm \cosh^2 x \pm 1 \)

\[ \int \cosh^{n-2} x \sinh^2 x \, dx = \left[ \frac{\sinh x \cosh^{n-1} x}{n-1} \right] - \frac{1}{n-1} \int \cosh^n x \, dx \]

M1: Integration by parts in the correct direction. If the formula is quoted it must be correct otherwise look for an expression of the form

\[ p \sinh x \cosh^{n-1} x \pm q \int \cosh^n x \, dx \]

A1: Correct expression

\[
(n-1) I_n = (n-1) I_{n-2} + \left[ \sinh x \cosh^{n-1} x \right] - I_n
\]

Introduces \( I_n \) and \( I_{n-2} \). Dependent on both previous method marks.

Use of given limits on their \( \sinh x \cosh^{n-1} x \). Does not need to be evaluated but note that

\( \cosh (\ln 2) = \frac{5}{4}, \sinh (\ln 2) = \frac{3}{4} \)

M1

\[
I_n = \frac{3 \times 5^{n-1}}{n \times 4^n} + \frac{(n-1)}{n} I_{n-2}^*
\]

cao

A1*

You can condone the occasional missing \( x, \, dx \) and limits along the way and “invisible” brackets may be recovered.

Do not allow e.g. an obvious sign error that gets “corrected” later – withhold the final A1 in such cases.
(b)  

\[
I_4 = \frac{3 \times 5^3}{4 \times 4^4} + \frac{3}{4} I_2 \quad \text{or} \quad \frac{3 \times a^3}{4 \times b^4} + \frac{3}{4} I_2
\]

Correct first application of **their or the given** reduction formula  

\[
= \frac{3 \times 5^3}{4 \times 4^4} + \frac{3}{4} \left( \frac{3 \times 5}{2 \times 4^2} + \frac{1}{2} I_0 \right) \quad \text{or} \quad \frac{3 \times a^3}{4 \times b^4} + \frac{3}{4} \left( \frac{3 \times a}{2 \times b^2} + \frac{1}{2} I_0 \right)
\]

Correct second application of **their or the given** reduction formula **that is consistent with the formula used in the first application** to obtain \( I_4 \) in terms of \( I_0 \)  

\[
I_0 = \ln 2
\]

\[
I_4 = \frac{735}{1024} + \frac{3}{8} \ln 2
\]

Cao (Allow equivalent exact forms e.g. may be factorised but fractions must be collected)  

Note that candidates may work from the “other end” e.g.  

\[
I_0 = \ln 2
\]

\[
I_2 = \frac{3 \times 5}{2 \times 4^2} + \frac{1}{2} I_0 \quad \text{M1} \quad I_2 \text{ in terms of } I_0
\]

\[
I_4 = \frac{3 \times 5^3}{4 \times 4^4} + \frac{3}{4} \left( \frac{3 \times 5}{2 \times 4^2} + \frac{1}{2} I_0 \right) \quad \text{M1} \quad I_4 \text{ in terms of } I_0
\]

\[
I_4 = \frac{735}{1024} + \frac{3}{8} \ln 2
\]

Cao (Allow equivalent exact forms e.g. may be factorised but fractions must be collected)

\[ = \ln \sinh (\ln 3) - \ln \sinh (\ln 2) \]
\[ \left( = \ln \frac{4}{3} - \ln \frac{3}{4} \right) \]
Correct use of limits e.g. \( \ln 3 \) and \( \ln 2 \) for \( x \) and e.g. 3 and 8 if \( u = e^{2x} - 1 \). They must be the correct limits for their method if they use substitution. Dependent on both previous method marks. ddM1

\[ = \ln \frac{16}{9} \] cao A1
