

**GCE AS/A level**

0976/01

S16-0976-01

**MATHEMATICS – C4**  
**Pure Mathematics**

P.M. FRIDAY, 17 June 2016

1 hour 30 minutes

#### **ADDITIONAL MATERIALS**

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet;
- a calculator.

#### **INSTRUCTIONS TO CANDIDATES**

Use black ink or black ball-point pen.

Answer **all** questions.

Sufficient working must be shown to demonstrate the **mathematical** method employed.

#### **INFORMATION FOR CANDIDATES**

The number of marks is given in brackets at the end of each question or part-question.

You are reminded of the necessity for good English and orderly presentation in your answers.

1. The function  $f$  is defined by

$$f(x) = \frac{17 + 4x - x^2}{(2x - 1)(x - 3)^2}.$$

(a) Express  $f(x)$  in terms of partial fractions. [4]

(b) **Use your result to part (a)** to find an expression for  $f'(x)$ . [2]

2. (a) (i) Expand  $\frac{1}{\sqrt{1+2x}}$  in ascending powers of  $x$  up to and including the term in  $x^2$ .

(ii) State the range of values of  $x$  for which your expansion is valid. [3]

(b) Use your expansion in part (a) to find an approximate value for one root of the equation

$$\frac{6}{\sqrt{1+2x}} = 4 + 15x - x^2. \quad [2]$$

3. The curve  $C$  has equation

$$x^4 + 2x^3y - 3y^4 = 16.$$

(a) Show that  $\frac{dy}{dx} = \frac{2x^3 + 3x^2y}{6y^3 - x^3}$ . [3]

(b) Show that there are only two points on  $C$  where the gradient of the tangent is  $-2$ . Find the coordinates of each of these two points. [4]

4. (a) The angle  $x$  is such that  $0^\circ \leq x \leq 180^\circ$ ,  $x \neq 90^\circ$ .

Given that  $x$  satisfies the equation  $3 \tan 2x + 16 \cot^2 x = 0$ ,

(i) show that  $3 \tan^3 x - 8 \tan^2 x + 8 = 0$ ,

(ii) find all possible values of  $x$ , giving each answer in degrees, correct to one decimal place. [8]

(b) Express  $24 \cos \theta - 7 \sin \theta$  in the form  $R \cos(\theta + \alpha)$ , where  $R$  and  $\alpha$  are constants with  $R > 0$  and  $0^\circ < \alpha < 90^\circ$ .

Hence, find the range of values of  $k$  for which the equation

$$24 \cos \theta - 7 \sin \theta = k$$

has no solutions. [5]

5. The parametric equations of the curve  $C$  are

$$x = \frac{3}{t}, \quad y = 4t.$$

- (a) Show that the tangent to  $C$  at the point  $P$  with parameter  $p$  has equation

$$3y = -4p^2x + 24p. \quad [4]$$

- (b) The tangent to  $C$  at the point  $P$  passes through the point  $(1, 9)$ . Show that  $P$  can be one of two points. Find the coordinates of each of these two points. [4]

6. (a) Find  $\int (2x+1)e^{-3x} dx$ . [4]

- (b) Use the substitution  $u = 4 + 5 \tan x$  to evaluate

$$\int_0^{\frac{\pi}{4}} \frac{\sqrt{4+5\tan x}}{\cos^2 x} dx. \quad [4]$$

7. The value,  $\pounds V$ , of a particular car may be modelled as a continuous variable. At time  $t$  years, the rate of decrease of  $V$  is directly proportional to  $V^3$ .

- (a) Write down a differential equation satisfied by  $V$ . [1]

- (b) Given that the initial value of the car is  $\pounds A$ , show that

$$V^2 = \frac{A^2}{bt+1},$$

where  $b$  is a constant. [4]

- (c) When  $t = 2$ , the value of the car has fallen to a half of its initial value. Find the value of  $t$  when the value of the car will have fallen to a quarter of its initial value. [4]

## TURN OVER

8. The position vectors of the points  $A$  and  $B$  are given by

$$\begin{aligned}\mathbf{a} &= \mathbf{i} + 3\mathbf{j} - 3\mathbf{k}, \\ \mathbf{b} &= 3\mathbf{i} + 4\mathbf{j} - \mathbf{k},\end{aligned}$$

respectively.

- (a) (i) Write down the vector  $\mathbf{AB}$ .

- (ii) Find the vector equation of the line  $AB$ .

[3]

- (b) The vector equation of the line  $L$  is given by

$$\mathbf{r} = -\mathbf{i} + 8\mathbf{j} + p\mathbf{k} + \mu(-2\mathbf{i} + \mathbf{j} + 3\mathbf{k}),$$

where  $p$  is a constant.

- (i) Given that the lines  $AB$  and  $L$  intersect, find the value of  $p$ .

- (ii) Determine whether or not the line  $L$  is perpendicular to the vector  $6\mathbf{i} - 4\mathbf{j} + 5\mathbf{k}$ , giving a reason for your answer.

[7]

9. The region  $R$  is bounded by the curve  $y = \cos x + \sin x$ , the  $x$ -axis and the lines  $x = \frac{\pi}{5}$ ,  $x = \frac{2\pi}{5}$ . Find the volume of the solid generated when  $R$  is rotated through four right angles about the  $x$ -axis. Give your answer correct to two decimal places.

[6]

10. Prove by contradiction the following proposition.

When  $x$  is real and  $x \neq 0$ ,

$$\left| x + \frac{1}{x} \right| \geq 2.$$

The first two lines of the proof are given below.

*Assume that there is a real value of  $x$  such that*

$$\left| x + \frac{1}{x} \right| < 2.$$

*Then squaring both sides, we have:*

[3]

**END OF PAPER**
